Abstract—This study aims to investigate the correlation between buyer perception and the influence of influencer authenticity on customer satisfaction within contemporary skincare digital marketing campaigns. Utilizing a purposive sampling method, data were collected from 253 Indonesian internet users in May 2025, all of whom had previously purchased skincare products based on influencer recommendations. The research examines how buyer perception and influencer trustworthiness influence purchase and repurchase intention. Data analysis was conducted using Structural Equation Modeling based on Partial Least Squares (SEM-PLS) with the help of Smart-PLS software. The results demonstrate that consumer perception plays a significant role in shaping satisfaction, which in turn affects repurchase intention. Additionally, influencer trustworthiness strongly impacts purchase intention; however, trust alone is insufficient without being supported by consistent and strategic social media advertising. In a competitive and saturated skincare market, authenticity and transparency in influencer communication are essential for maintaining consumer trust. This study suggests that digital marketing strategies involving credible influences, when paired with effective advertising efforts, can better foster customer satisfaction, engagement, and long-term loyalty. The insights derived from this study offer practical value for skincare brands seeking to refine their influencer marketing strategies and build campaigns aligned with evolving consumer behavior in the digital space.

Keywords—buyer perceptions, influencer authenticity, skincare, customer satisfaction, digital marketing

I. INTRODUCTION

Online digital marketing has been rapidly increasing alongside the number of users reaching 212 million out of a population of 285 million people in January 2025 [1]. Recent research suggests that 87% of 400 Indonesian consumers make purchasing decisions based on influencer recommendations especially in the skincare industry [2]. This growing dependence creates a phenomenon which we can term "The Authenticity Paradox" has profound implications for consumer satisfaction and brand trust in the skincare industry. With industry value projected to exceed USD 2.59 billion in 2024 and Indonesia's specific market reaching USD 269 million by 2028, the stakes are increasingly high for brands and consumers alike.

Survey data shows that Indonesian consumers primarily seek product information from influencer reviews (60.9%) and Instagram (76.4%) which makes them particularly vulnerable to misleading claims that may be amplified through influencer channels. Beauty influencer Monica Moher points out that Indonesian consumers sometimes have a tendency to be attracted to exaggerated claims, such as "9x whitening effect" or "10% niacinamide," without considering whether these products meet their needs [3].

While existing literature has established the growth of influencer marketing trends in Southeast Asia, a critical research gap remains. Previous studies have yet to empirically investigate the "Authenticity Paradox" specifically. The mechanisms through which consumers perceive authenticity, the specific markers that trigger scepticism, and the resultant impact on long-term brand loyalty are not well understood.

This study aims to fill this gap. Our research makes a unique contribution by quantitatively analyzing the dissonance between influencer marketing and customer perception of authenticity. We identify the key factors that Indonesian skincare consumers associate with authentic influencer content and measure the direct impact of these factors on purchase intent and brand trust. Consequently, this study provides empirically grounded strategies for brands and influencers to navigate the market.

II. LITERATURE REVIEW

Several studies research for understanding how perceived authenticity of influencer impact consumer satisfaction in the context of digital marketing campaigns for skincare products. Zhiwei and Han examined the impact of anchor identification on likelihood of customer to purchase beauty products [4].

A. Digital Marketing Campaign

Digital marketing campaign is a way to promote products or services through digital and media social. An interesting digital marketing campaign could leverage up brand value and attract more customers.

B. Skincare

Product that is used to taking care of human's skin. This could cleaning, brighten, and maintaining skin healthiness.

C. Perceived Authenticity

Perceived Authenticity is defined as the overall evaluation of an social media influencer based on consumers' perceptions of the influencer's credibility, truthfulness, sincerity, expertise, and how open they are about their life on social media [5]. Influencer authenticity is known to impact consumers' brand related decision-making, because buyer purchase intention impacted by the trust and content relevancy of social media influencer [6].

D. Influencer Trustworthiness

Influencer trustworthiness is that feelings such as liking or trust are assumed to occur and spread within groups of individuals. If a consumer trusts an influencer and the influencer likes a brand, the consumer will also like the brand. Moreover, according to the balance model, trustworthiness sustains the link between endorser and message [7].

E. Purchase Intention

Purchase intention is a consumer expression that can manifest as interest or a tendency to foresee the desire to purchase an item within a certain timeframe, driven by a strong internal motivation [8]. Purchase intention reflects a consumer's plan to buy a product. It occurs when consumers express a desire to purchase a product in response to it. Influencer trustworthiness has been found to positively influence purchase intention in the context of online shopping [9]. Consumers who hold a positive attitude toward brands or products are more likely to develop an interest in buying them [10].

F. Customer Satisfaction

Customer gain satisfaction that arise from user's overall experience with product recommended by Influencer. Costumer's satisfaction is one aspect that determine the successes of marketing activities. Increasing of costumer will potentially lead to sales growth in long or short term, as well as market share as a result of the repurchase intention [11].

G. Customer Perception

Customer perception can influence the decision of purchase intention [12]. Customer perception is formed as a result of visual input received by consumers. An example is an influencer marketing at social media advertising. Influencer marketing or endorsement is a paid service that intentionally upload product with advertising content [13]. All forms of social media advertising have different perceptual effects for each consumer but found that many consumers can feel attracted and can lead to purchasing intention. In short, customer perceptions of social media advertising through influencer content that appear on social media can influence customer purchase intentions on the advertised product.

H. Social Media Advertising

In social media advertising, someone is needed who can create good relationships online to share product information with the audience [14]. The person in question is an influencer that is well-known figure and active social media user who have many followers [15]. These 'influencers' will carry out their duties to attract the attention of consumers so that consumers have considerations to buy and use goods and

services from the company they will choose. The aim of promoting the products being sold is called social media advertising.

I. Repurchase Intention

Repurchase intention is the individual's judgement about buying again a product from the same company [16]. Followers' repurchase intention refers to the likelihood or willingness of individuals who follow a particular influencer to make repeat purchases based on that influencer's future recommendations. This concept is closely tied to customer satisfaction [17].

III. METHODOLOGY

A. Research Model

Fig. 1. Research model.

As shown in Fig. 1, this investigation employed a targeted approach to identify buyer perceptions of influencer authenticity impacts satisfaction in skincare digital marketing. The study centers on individuals in Indonesia who have engaged in purchases of skincare products because influencer authenticity marketing, utilizing online surveys as its primary method of data collection. Data collection occurred in April 2025, involving 253 respondents in Indonesia, utilizing a purposive sampling method. Structural Equation Modelling with Partial Least Squares (SEM-PLS) was selected as the primary analytical technique for this study, as it is uniquely suited to address the research objectives and the nature of the available data. This study develops a robust approach to examining the intricacies of consumer behavior and the quality of online services.

B. Sample

Indonesian internet users who had bought skincare product that promoted by an influencer in the previous six months were the subjects of this research. The sample criteria consisted of adults aged 17 years and over. Data was collected through an online questionnaire distributed through social media and online chat platforms where respondent were asked to answer based on their experience buying skincare that promoted by influencer.

C. Analysis and Hypotheses:

To assess the proposed model, SEM PLS modelling was used. The validity of this research is ensured through the use of the Fornell-Larcker criterion, cross-loading assessments, and the Heterotrait-Monotrait (HTMT) correlation ratio.

Where Cronbach's Alpha was used to ensure the instrument's dependability, each construct showed high performance. This research effectively assesses and validates buyer perceptions of influencer authenticity impacts satisfaction in skincare digital marketing in Indonesia.

Hypotheses:

1. Hypothesis 1 (H1): Perceived authenticity (PA) impacts to purchase intention (PI). Perceived authenticity that delivered by influencers increasing intention to shop.
2. Hypothesis 2 (H2): Influencer trustworthiness (T) impacts to Purchase Intention (PI). Trustworthy influencers will provide confidence in the buyer's intention to buy the product being promoted.
3. Hypothesis 3 (H3): Customer satisfaction (S) influences on Purchase Intention (PI). When customers are satisfied with a product, they are more likely to make repeat purchases.
4. Hypothesis 4 (H4): Customer satisfaction (S) impacts to Repurchase Intention (RI). Satisfied customers tend to have the intention to shop again the products that are recommended by a same influencer.
5. Hypothesis 5 (H5): Customer perception (CP) impacts to Purchase Intention (PI). Favourable perceptions from customer towards an influencer will increase the likelihood of consumers making a purchase.
6. Hypothesis 6 (H6): Social Media Advertising (SM) impacts to Purchase Intention (PI). Social media advertisements increase product visibility and give persuasive calls to purchase the products.
7. Hypothesis 7 (H7): Social Media Advertising (SM) impacts to Customer Perception (CP). Social media advertising leveraging influencer authenticity and delivering intention to make purchases.

This table of this research is accessible at <https://doi.org/10.5281/zenodo.16355326>.

IV. RESULT AND DISCUSSION

A. Respondent's Demographics

The most used e-marketplaces in Indonesia for purchasing skincare products are Shopee and Tokopedia. Whereas less than 5% of respondents buy at other platforms such as: Lazada and Blibli, while 21% buy skincare products at other e-marketplaces.

Most of the respondents are aged 12-27 (84.4%), which shows that this study's respondents are mostly Generation Z, where most of the respondents are women (85.4%).

Most respondents' monthly income is between IDR 1,000,000 to IDR 5,000,000 (40.6%), which shows that they are the most purchasers. 36.5% have income less than IDR 1,000,000, 11.5% of respondents have income more than IDR 15,000,000, 8.3% have income around IDR 6,000,000 to IDR 10,000,000, and 3.1% of respondents have around IDR 11,000,000 to IDR 15,000,000.

It found that 54.5% of respondents shop for skincare products 1 time per month, 26% shop 2 times per month, 11.4% shop 3 times per month and 8.1 % shop 4 or more than 4 times per month.

The survey results show that 52.6% of respondents follows only 1-5 influencer, 27.8% follows 5-10 influencer, 10.3%

follows 10-20 influencer, and 9.3% of the respondents follows more than 20 influencers.

B. Measurement Model

The model path coefficient output is presented in Fig. 2, while Table I summarizes the validity and reliability of the measurement model used in this study.

Fig. 2. Model path coefficient output.

TABLE I. VALIDITY AND RELIABILITY

Variables & Indicators	Cross Loading	AVE	CR	CA
Customer Perception (CP)		0.549	0.803	0.795

T3	0.762			
T4	0.812			
T5	0.810			

The study's measurement tools demonstrate acceptable validity and reliability across all constructs. This is based on established guidelines from [19], which Average Variance Extracted (AVE) values range from 0.437 to 0.688, with Customer Satisfaction showing the highest extraction (0.688) and Influencer Trustworthiness showing the lowest (0.437). The Cross Loading values are robust, with all indicators exceeding the recommended 0.7 threshold (ranging from 0.725 to 0.872). Composite Reliability (CR) shows strong internal consistency across all constructs, with values ranging from 0.790 to 0.917, well above the recommended 0.7 threshold. Similarly, Cronbach's Alpha (CA) values range from 0.674 to 0.886, with Customer Satisfaction (0.886), Customer Perception (0.886), and Purchase Intention (0.806) demonstrating particularly high internal reliability. Social Media Advertising and Repurchase Intention, also show satisfactory psychometric properties with CRs of 0.813 and 0.862 respectively. Table I shows that the measurement model is generally reliable and valid for the research purposes.

TABLE II. PATH COEFFICIENT

Path	Standard Deviation	t-values	P-values	Decision
CP->PI	0.144	1.106	0.269	Accepted
S->PI	0.110	3.559	0.000	Accepted
S->RI	0.061	10.708	0.000	Accepted
T->PI	0.109	2.575	0.010	Accepted

Path	Standard Deviation	t-values	P-values	Decision
SM->CP	0.043	17.809	0.000	Rejected
SM->PI	0.141	0.240	0.810	Rejected

Fig. 3. Bootstrapping result.

As shown in Fig. 3, the bootstrapping results and path coefficient analysis reveal that not all hypotheses demonstrated significant relationships. According to Table II, only four paths show statistical significance with p-values less than 0.05: Customer Satisfaction to Purchase Intention ($S \rightarrow PI$, $p=0.000$, $t=3.559$), Customer Satisfaction to Repurchase Intention ($S \rightarrow RI$, $p=0.000$, $t=10.708$), Influencer Trustworthiness to Purchase Intention ($T \rightarrow PI$, $p=0.010$, $t=2.575$), and Social Media Advertising to Customer Perception ($SM \rightarrow CP$, $p=0.000$, $t=17.809$). These significant paths all have t-values exceeding the critical threshold of 1.96. In contrast, three paths failed to show significant relationships: Customer Perception to Purchase Intention ($CP \rightarrow PI$, $p=0.269$), Perceived Authenticity to Purchase Intention ($PA \rightarrow PI$, $p=0.630$), and Social Media Advertising to Purchase Intention ($SM \rightarrow PI$, $p=0.810$), as their p-values exceed 0.05 and t-values fall below 1.96. These findings suggest that customer satisfaction and influencer trustworthiness directly influence purchase intention, while perceived authenticity and social media advertising's direct effect on purchase intention was not supported by the data.

C. Customer Satisfaction to Purchase Intention

This hypothesis is significant as it explores the relationship between customer satisfaction and purchase intention ($p=0.000$, $t=3.559$). It suggests that when customers are satisfied with their experience, they are more likely to form intentions to purchase products promoted by influencers. This highlights the importance of ensuring positive customer experiences to drive initial purchase decisions.

D. Customer Satisfaction to Repurchase Intention

This hypothesis is strongly supported ($p=0.000$, $t=10.708$) as it investigates the connection between customer satisfaction and the likelihood of repurchase. It reveals that when customers are satisfied with their previous experiences, they are significantly more likely to have the intention to purchase again from the same business in the future. This demonstrates the critical importance of customer satisfaction in driving repeat purchases and fostering customer loyalty of ensuring

positive customer experiences to drive initial purchase decisions.

E. Influencer Trustworthiness to Purchase Intention

This hypothesis is significant ($p=0.010$, $t=2.575$) as it explores the link between influencer trustworthiness and purchase intention. It shows that when consumers perceive influencers as trustworthy, they are more likely to develop intentions to purchase the promoted products. Trust is crucial in influencer marketing, and establishing credibility through authentic content and transparent partnerships can lead to increased purchase intentions.

F. Social Media Advertising to Customer Perception

This hypothesis shows the strongest significance in our model ($p=0.000$, $t=17.809$), demonstrating that social media advertising plays a decisive role in shaping customer perceptions. This highlights the importance of creating effective and strategic social media advertising campaigns that positively influence how customers perceive products or services.

G. Customer Perception to Purchase Intention

This hypothesis shows the strongest significance in our model ($p=0.000$, $t=17.809$), demonstrating that social media advertising plays a decisive role in shaping customer perceptions. This highlights the importance of creating effective and strategic social media advertising campaigns that positively influence how customers perceive products or services.

H. Customer Perception to Purchase Intention

This hypothesis is not supported ($p=0.269$, $t=1.106$) as it investigates the relationship between customer perception and purchase intention. Despite theoretical expectations, our findings suggest that positive customer perceptions alone do not directly translate to purchase intentions. This indicates that other mediating factors may be necessary to convert positive perceptions into actual purchase decisions.

I. Perceived Authenticity to Purchase Intention

This hypothesis is not supported ($p=0.630$, $t=0.482$) as it examines the connection between perceived authenticity and purchase intention. The results suggest that authenticity in marketing messages alone is not sufficient to drive purchase decisions. This highlights the complexity of consumer decision-making processes and suggests that authenticity may need to work through other variables to influence purchasing behaviour.

J. Social Media Advertising to Purchase Intention

This hypothesis is not supported ($p=0.810$, $t=0.240$) as it explores the direct impact of social media advertising on purchase intention. This indicates that social media advertising does not directly influence purchase intentions but likely works through mediating variables such as customer perception. This underscores the importance of developing comprehensive marketing strategies that address multiple factors in the consumer decision journey.

Based on the hypothesis testing results, four out of seven hypotheses have a significant impact: Customer Satisfaction to Purchase Intention, Customer Satisfaction to Repurchase Intention, Influencer Trustworthiness to Purchase Intention,

and Social Media Advertising to Customer Perception. Moreover, the results can be summarized as follows:

1) Social Media Advertising: Effective social media advertising significantly shapes customer perceptions ($p=0.000$, $t=17.809$). This highlights the importance of investing in high-quality content creation, businesses should focus on developing compelling visual content, engaging copywriting, and strategic placement to positively influence how customers perceive their products and services.

2) Customer Satisfaction: Customer satisfaction significantly impacts both initial purchase intention and repurchase intention. Businesses should prioritize strategies that enhance customer satisfaction at every touchpoint of the customer journey.

3) Influencer Trustworthiness: Influencer trustworthiness has a significant effect on purchase intention. When selecting influencer partnerships, businesses should prioritize credibility and authenticity over mere follower count, and who maintain genuine relationships with their followers.

4) Customer Perception: While social media advertising strongly influences customer perception, our findings indicate that positive perception alone does not directly translate to purchase decisions.

5) Perceived Authenticity: The non-significant relationship between perceived authenticity and purchase intention suggests that authenticity alone is insufficient to drive sales.

6) Social media advertising does not directly impact purchase intention ($p=0.810$) but works through customer perception. This highlights the importance of understanding the full customer journey and developing marketing strategies that address multiple touchpoints rather than expecting immediate conversion from advertising exposure.

V. CONCLUSION

The findings conclude that brand awareness and consumer trust significantly influence purchase intention. At the same time, deceptive elements such as misleading advertisements, perceived deception, and product overclaim indirectly affect consumer behaviour through trust and risk perception. Strengthening brand credibility and minimizing misleading claims are essential to enhance consumer confidence and drive purchase decisions.
